Summary

I am a B.Tech student (2027 Batch) with a strong foundation in Python, SQL, data analysis, and machine learning. Skilled in data preprocessing, exploratory data analysis (EDA), visualization, and developing data-driven solutions using modern analytical and AI tools. Passionate about solving real-world problems through data, continuous learning, and contributing effectively in collaborative, fast-paced environments.

Education

Ajay Kumar Garg Engineering College 2027
Bachelor of Technology (B.Tech), Ghaziabad, Uttar Pradesh
CGPA: 7.74/10
- Awarded fee waiver based on JEE Main score

Skills

Programming: Python, SQL, C++
Visualization and Reporting: Power BI, DAX, MS Excel, Matplotlib, Seaborn, Dashboards, KPI Tracking
AI/ML: Scikit-learn, ML algorithms(Supervised/Unsupervised learning), LLMs, RAG, LangChain, LangGraph, Prompt Engineering
Database and Backend: PostgreSQL, FastAPI, REST APIs
Tools: MS Word, MS PowerPoint, Ms Excel, VS Code, Jupyter Notebook, Google Colab, Git, GitHub, Docker, Postman, AI Tools
Soft Skills: Problem Solving, Critical Thinking, Attention to Detail, Collaboration, Teamwork, Communication, Time Management
Research and Analysis: Structured Research, Data Cleaning, Data Wrangling, Exploratory Data Analysis, Trend Analysis, Insight Generation

Projects

IntelliNews | Demo

- NLP preprocessing with tokenization, stopword removal, and sentence cleanup
- Extractive news summarization
- Sentiment analysis with polarity, confidence, and evidence words
- Named entity extraction for people, organizations, locations, dates, money, and percentages
- Question answering using prompt-style retrieval over article sentences

California Housing Price Prediction | 🐙 GitHub

- Built a ML model to predict California housing prices using demographic and housing datasets.
- Performed data preprocessing, feature engineering, and exploratory data analysis to identify important data patterns.
- Trained and evaluated regression models using Scikit-Learn with metrics such as RMSE and R2 score.
- Visualized trends and model performance using Matplotlib and Seaborn to support clear analytical reporting.

e-commerce SQL-Project | 🐙 GitHub

- A full database schema for an e-commerce platform.
- Sample data generation scripts for customers, orders, products, payments, shipping, reviews, and inventory.
- A SQL analysis file with queries for revenue, customer behavior, seller performance, product insights, and delivery metrics.
- exploring business intelligence questions in e-commerce.

Food Ordering Behavior Analysis | 🐙 GitHub

- Analyzed more than 50,000 customer records using Python and Pandas to understand ordering behavior.
- Cleaned, transformed, and organized raw data for accurate analysis and insight generation.
- Identified customer retention and marketing trends through exploratory data analysis.

Achievements & Certifications

100+ DSA Problems solved on Leetcode & GFG.
SQL Certificate – HackerRank 2026
Power BI Certificate – SkillCourse 2026
Python Libraries for Data Science – Simplilearn 2026
